Inserting the battery pack and routing the EFGI 650 cables

1. The battery cell is inserted into the pocket on the back to position it as high as possible in the backpack

2. Pull the elastane insert over the edges of the battery pack housing

3. Push the battery pack into the bag with light pressure

4. Lead the connection cable out of the backpack through the tab below the carrying handle

5. Insert the cathode and battery pack connectors through the carrying handle

6. There is another tab on both shoulder straps through which the plugs can be fed

7. Guided in this way, the cables reach the control unit cleanly and do not restrict your freedom of movement

   ... for the journey to the water, stow the connection cables in the side pockets

8. Stow the cathode in the side compartment of the backpack and secure it with the quick-release strap

9. You can store the anode cable opposite and also secure it against loss.
